

1 An open-source tool creating realistic digital twins of cells for diffusion MRI modeling. Malte Brammerloh (Ref: 53688)

2 Accounting for susceptibility effects in chemical-shift encoded fat-water separation for muscular dystrophies. Pierre-Yves Baudin (Ref: 54115)

3 k-q-ASeDiWA: Joint k-q reconstruction for accelerated diffusion MRI with learned phase estimation. Anni Liu (Ref: 54138)

4 To tilt or not to tilt: Assessing the impact of physical head misalignment on orientation-dependence of MRI parameters. Melanie Bauer (Ref: 54208)

5 Joint diffusion-relaxometry of the brain via multi-echo spin-echo diffusion EPI. Aron Gimesi (Ref: 54274)

6 Distinct microstructural diffusion MRI signatures in directed and undirected cortical organoids. Andrés le Boeuf Fló (Ref: 54308)

7 Reassessing intracellular volume fractions by combining diffusion MRI with relaxation time component analysis. Bastian Maus (Ref: 54323)

8 ?NN: a physics-informed histology-MR neural network for microstructural diffusion imaging in cancer. Athanasios Grigoriou (Ref: 54339)

9 Non-invasive glioma grading through biophysical diffusion MRI modelling:the complementary role of Histo-? Sim and SANDI. Athanasios Grigoriou (Ref: 54381)

10 Joint quantitative MRI reconstruction and brain age prediction. Federica Lupo (Ref: 54347)

11 Mapping liver microstructure with Histo-μSim: Effect of regularization and maximum b-value. Matthew Cherukara (Ref: 54355)

12 Deep Learning Synthesis of Diffusion Gradient Directions for Accelerated Diffusion Tensor Imaging. Simone Santoro (Ref: 54362)

13 Human-informed white matter microstructural simulations link myelin loss to diffusion metrics. Alessandro Di Matteo (Ref: 54341)

14 Contrast ratio assessment of the Substantia Niga in Neuromelanin-Sensitive MRI using TSE and MT-GRE sequences. Vahid Malekian (Ref: 54401)

15 Advanced Diffusion Parameter Mapping Using a Mobile 1.5T MRI Scanner. Christoph S Aigner (Ref: 54423)

16 Parameter-Estimation-Driven Optimization of Diffusion MRI Protocols for Microstructure Imaging. Ekin Taskin (Ref: 54452)

17 Functional and structural brain correlates in obesity: Multimodal neuroimaging reveals insulo-striatal reward hyperconnectivity and disruption of memory-interoceptive pathways associated with microstructure and magnetic susceptibility. Elena de la Calle (Ref: 54457)

18 Altered association between grey matter microstructural characteristics and cerebral oxidative metabolism in Multiple Sclerosis. Alessandra S Caporale (Ref: 54459)

19 Fluid-suppressed QTI unmasks isotropic diffusivity variance in high-grade glioma: initial results. Oliver Gödicke (Ref: 54464)

20 Simulating how tissue microstructure affects multimodal MRI. Michiel Cottaar (Ref: 54492)

21 Revealing the myelin-induced magnetic field correlation modulated by white matter tract orientation at ultra-high field. Lewis Kitchingman (Main conf. N° 54503)

22 Neuroinflammation-related microstructural alterations using kurtosis time-dependence. Paulina J Villaseñor (Ref: 54519)

23 Exact PGSE Signal Model for Diffusion Confined to Cylindrical Surfaces. Erick Jorge Canales-Rodríguez (Ref: 54521)

24 Co-MEDS: Convex Maximum Entropy Deconvolution on a Sphere for Fiber Orientation Estimation in Diffusion MRI. Harshit Harshit (Ref: 54534)

25 In vivo detection of extracellular microscopic tortuosity in the human corpus callosum using oscillating-gradient diffusion filters at 3T. Ignacio Lembo Ferrari (Ref: 54540)

26 Coronary artery revascularization type and disease severity is linked with alterations in normal-appearing white matter microstructure. Ali Rezaei (Ref: 54549)

27 Probabilistic DL approaches in Diffusion-Relaxation MRI model fitting: Comparison Of Mixture Density Networks and Normalizing Flows. Nicola Casali (Ref: 54565)

28 In vivo SANDI diffusion MRI reveals cerebral neuroplasticity associated with long-term functional recovery in a rat model of spinal cord injury. Lori Berckmans (Ref: 54588)

29 Characterizing spatiotemporal drift in Mean Diffusivity in Human and Phantom data. Manfredi Alberti (Ref: 54595)

30 Towards diffusion-weighted microstructure characterization of lymph nodes using simulation-based dictionary matching. Salomé Baup (Ref: 54597)

31 Magnetization transfer imaging reveals distinct temporal microstructural changes in a rat model of intracerebral hemorrhage. Gemma Manich (Ref: 54607)

32 Estimation of SV2A PET-Derived Synaptic Density from Quantitative MRI Using Data-Driven Methods. Mikhail Zubkov (Ref: 54613)

33 Surface-to-Volume Ratio Mapping of Brain Organoids and Fiber Phantoms Using 28.2T High-Frequency OGSE. Tatiana Nikolaeva (Ref: 54624)

34 A numerical simulation framework for combined diffusion and perfusion MRI. Jasmine Nguyen-Duc (Ref: 54633)

35 Magnetic Resonance Imaging of Early Microstructural Changes in Amyotrophic Lateral Sclerosis. Nayereh Ghazi (Ref: 54645)

36 Reliability Framework for Simulation-Based Microstructure Estimation with Real Data. Jonathan Rafael-Patino (Ref: 54646)

37 Combined estimation of T2 and T2* using a GESSE sequence and EPG signal modelling. Quentin Raynaud (Ref: 54681)

38 How does the menstrual cycle reshape women’s brains? Impact of hormonal changes on white matter microstructure with free water elimination. Rita Reis Nunes (Ref: 54682)

39 Under one minute NATive QSM enables robust and reproducible subcortical iron mapping with strong clinical translation potential. Jazmin Ximena Suarez Revelo (Ref: 54686)

40 Evaluating MTV-correction in MRI models for in vivo brain iron estimation. Maryana Pozina (Ref: 54693)

41 Decoding the female brain: Investigating cerebral white matter changes throughout the menopausal transition, using diffusion MRI. Kato Herregods (Ref: 54694)

42 GAIA - Green Artificial Intelligence for Accelerated medical imaging: Sustainable and efficient diffusion MRI analysis. Maeliss Jallais (Ref: 54701)

43 Effect of Effective Frequency Definition on Surface-to-Volume Ratio Estimation from Oscillating Gradient Diffusion MRI. Maria Paula Del Popolo (Ref: 54710)

44 Comparison of Diagnostic Performance of Malignant from Benign Prostatic Areas on Prostatic DWIs with Different b-Values between Complexed Signal Average and Conventional Reconstruction Methods. Yoshiharu Ohno (Ref: 54142)

45 Differential vulnerability of ODF- and streamline-based tractography metrics to noise levels in diffusion MRI. Sewon Lim (Ref: 54248)

46 Impact of moderate Multiband Acceleration on Quality of Diffusion MRI Quality of the Brain at 3T. Marco Meixner (Ref: 54256)

47 Evaluation of IVIM parameter recoverability using limited four-b-value diffusion MRI in esophageal cancer. Victoria Joppin (Ref: 54286)

48 Ex vivo microstructural characterization of oral squamous cell carcinoma using IMPULSED time-dependent diffusion MRI. Jeroen de Groot (Ref: 54329)

49 Lithium-associated white matter microstructural changes in bipolar disorder: preliminary TBSS-tractometry results from the R-Link study. Giovanni Videtta (Ref: 54425)

50 Impact of regularized parallel imaging reconstruction on cardiac diffusion tensor imaging parameter maps. Vitali Telezki (Ref: 54512)

51 White-matter brain-age gap from along-tract FA and MD and its association with cognitive development in youth. Sophie Mosegaard (Ref: 54523)

52 Preliminary Evaluation of Fractional Anisotropy Sensitivity to Longitudinal Changes Following Peripheral Nerve Injury. Isaac Manzanera Esteve (Ref: 54571)

53 Detectability analysis of lymphocyte infiltration measurement via clinical diffusion MRI: a simulation study. Daniel Navarro-Garcia (Ref: 54584)

54 Structural Connectome Sensitivity Analysis in the Alzheimer’s Disease Spectrum using Cortical ROI Amendment for Juxtacortical White Matter Parcellation. Gyula Gyebnár (Ref: 54593)

55 Neonatal white matter FA in thalamo-frontal and perirolandic tracts predicts full-scale IQ at age 5 in children with spina bifida aperta. Tobias Fernandez-Borkel (Ref: 54649)

56 How To Improve Prediction Capability for Patient’s Outcome in Postoperative Stage I NSCLC Patients with Different Molecular Information on MRI with PET/CT. Masahiro Endo (Ref: 54140)

57 Early detection of bone metastases in prostate cancer using advanced whole-body dMRI. Carlos Macarro (Ref: 54213)

58 Development of a GUI based on Python for DWI Quality Analysis. Alfredo Rodríguez (Ref: 54346)

59 Incomplete reversibility of fixation-induced changes in postmortem human brain white matter MRI following rehydration. Lennart Bedarf (Ref: 54356)

60 Spatial-angular implicit neural representations for accelerated diffusion MRI via joint k-q reconstruction. Lara Kunze (Ref: 54406)

61 Multiparametric characterization of cervical spinal cord involvement in women with X-linked adrenoleukodystrophy: preliminary results from the ARISE study. Marianne Golse (Ref: 54605)

62 A unified preprocessing framework for preclinical microstructural and quantitative MRI data. Cristiana Tisca (Ref: 55453)

63 DEMONE: A longitudinal mouse-to-human study linking brain imaging biomarkers to cellular pathology in Myotonic Dystrophy Type 1. Eléonore Vermeulen (Ref: 55474)
